Current canonical UCell LR-program association: not available; no association panel was generated.

b Same-spot ligand-receptor expression concordance

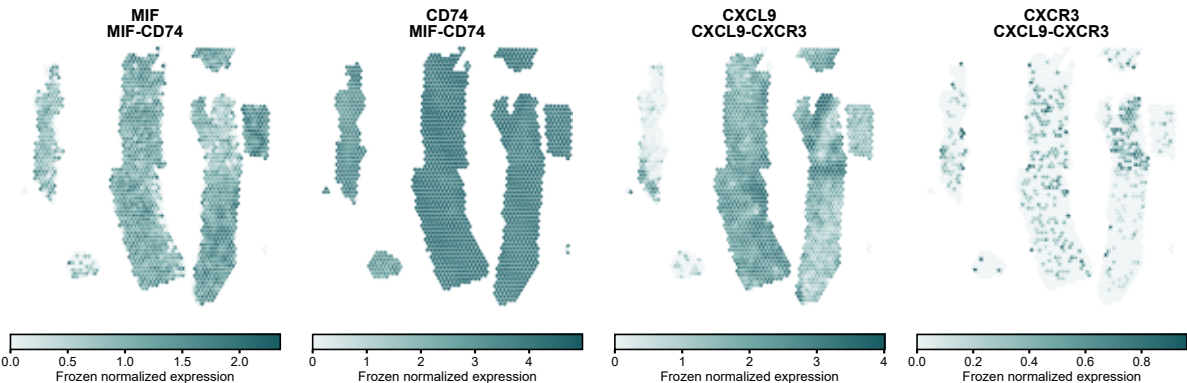

c Frozen kNN neighborhood expression support

Dot size: -log10 BH FDR | * BH FDR < 0.05

d Representative separate-gene expression maps | Cap.area4

N/E: prespecified metric not evaluable from frozen source data; not a zero or nonsignificant result.
Expression support does not establish signaling, contact, activation, communication, or causality.
